Meeting Minutes - Client Meeting #9

What Was Discussed:

- Updated Ruth on the directories she asked us to make during the last meeting. We let her know that they have been created and the other 2 teams have been informed.
- Discussed the ways that we will ensure security of the database.
 - This will be done by storing the encrypted user passwords and student numbers in the database as these are sensitive pieces of info.
 - This will also be done by protecting the database from sql injection attacks.

Feedback/Questions/Concerns From Ruth:

- Ruth had questions about how the other teams would be able to create databases and if there is a limit.
 - The limit is 12 and each team would have their own database with all the tables they would need. They would then need to create a user for the database and grant privileges in order to connect to it from their code.
- Ruth has been having trouble with signing into cPanel. Asked us to forward the email with the sign-in from Sharon to her.

What To Work On This Week:

- Database implementation across all pages (continue working on this)
- Email Ruth the cPanel login
